

CMC Unit

CMC

The Camera Motion Control (CMC) unit contains the drive electronics for the Pan & Tilt heads, Height Drive and Lens functions. The CMC is normally mounted to the side of the TG-18 and TG-19 heads and also features the Local/Remote control to allow local manual operation of the head.

PDU

The Power Distribution Unit (PDU) contains all of the power supplies required by the TG-27, TG-18 and TG-19 robotic pan and tilt heads. It also acts as the main interconnection points for the Ethernet or RS422 serial data communications with all of the control panels.

PDU Unit

Lens Drive

Designed specifically for each lens model, the Lens Drive units integrate seamlessly with many existing lenses not fitted as standard with Servo functionality for Focus and Zoom. Fitted without the need for permanent modification to the lens, the Lens Drive allows these models to be utilised in Robotic camera systems.
